

‡Length of a weld stud is measured from the welding surface of the head to the end of the shank, excluding the projections.

Tolerance on Length					Up to 1 in., Incl.: -0.03			Over 1 in. to 2 in., incl.: -0.06			

Description	A fastener with unified thread pitch and a cylindrical, low profile head with flat parallel surfaces. The top of the head has three hemispheroidal-shaped weld projections equally spaced on a locating circle concentric with the shank.
Applications/ Advantages	Enables a threaded fastener to become a permanent, integral part of an assembly. The top projection style is preferred when a smooth, finished appearance on the outer surface is desired.
Material	C1008 - 1010 or equivalent welding quality carbon steel
Tensile Strength	60,000 psi., minimum
Length of Thread	Studs with nominal lengths of 2 inches or less should have threads extend to within one thread of the top of the weld projections. Studs over 2 inches should have a minimum thread length of 1.75 inches.
Finish	Weld screws are supplied with a plain, unplated finish to facilitate welding.

*Ohio Nut & Bolt is the original writer of these weld screw specifications.
