|                                 |  |
|---------------------------------|--|
| <b>Description</b>              | A straight shank fastener with a low rounded top service with a flat bearing surface and external threads designed to go through a hole or nut that is pre-tapped to form a mating thread for the screw. The six-lobed recess has a cylindrical pin attached to the center of the base of the recess.  |
| <b>Applications/ Advantages</b> | Used in applications that require general atmospheric corrosion resistance, in places where the risk of unwanted tampering is high The pin-in recess provides a deterrent against loosening the screw, since a standard six-lobe screwdriver cannot engage with the recess. A specially designed driver--not commonly available in the retail market--is required to install or loosen the screw. Button head provides a smooth and finished appearance. |
| <b>Material</b>                 | 18-8 Stainless   |
